

FIFA World Cup Match Alpha Model

Transparent local model for statistical alpha estimates. It estimates probabilities, fair odds, scorelines, environmental effects, and alpha EV versus optional market odds. It does not provide staking or investment advice.

Available Matches

2 fixture(s) in this UTC window are hidden because a team is still an unresolved bracket slot such as Winner Group K or Winner Match 73. Update data/fixtures.csv with actual teams before modelling those games.

Portugal vs Croatia

FIFA World Cup | Round of 32 | 2026-07-02 23:00 UTC | BMO Field

Primary model

Baseline external-calibrated

Behavior layer

Diagnostic only

The model tested recent historical behavior fairly using only pre-match data. In that strict test, recent behavior did not improve both Brier score and log loss. The main probabilities and alpha tables therefore use external-calibrated team ratings; behavior is shown only as a warning or context signal.

Behavior disagreement: diagnostic only. The behavior layer changes Portugal win probability by -8.3 percentage points, but strict backtesting has not validated behavior as a primary signal. Behavior disagreement: diagnostic only. The behavior layer changes Croatia win probability by +5.6 percentage points, but strict backtesting has not validated behavior as a primary signal.
